## Informed Consent

1. *While the overall record of the use of IASIS is quite successful, there can be no guarantee of success in your particular instance. Before you give your consent to be treated, please read the following and ask as many questions as are necessary for you to understand this process.*
2. IASIS is not a medical treatment and is no substitute for effective standard medical treatment. If you need medical treatment, you are urged to seek it. And it is important to report any odd or uncomfortable sensations or experiences to your IASIS clinician and to your physician. Those whose medical status is unstable should definitely consult with their physician about becoming more medically stable before undertaking this treatment.
3. *If you are taking medication, it will be necessary to stay in close contact with your physician. It has been our observation that the need for these medications often decreases, and people may start having side effects. The types of medication include those for sugar problems (diabetes), thyroid problems, migraines and other headaches, seizures, movement problems, spasticity and low or high blood pressure and various emotional, thinking, or perceptual problems.*
4. While the long-term effects of using electrical field feedback as we use it is unknown, for reference, a cellular telephone generates a signal at least millions of times the power of the IASIS feedback signal. The intensity of our field is less than a trillionth of a watt and is on for a few seconds during each session. A background signal approximately a thousand times less than the feedback signal is also present as soon as the EEG begins to read the brainwaves. No instances of problems with the emissions from the feedback have ever been recorded.
